Analysis

Summary based on countries

Max and Min for each score

Linear regression model for
identifying relationships

Model

Build a model for
predicting city scores

Use the model to get a prediction score for each cities and see if any cities stand out, why?

Possible uncertainties:
There might be no relationship between any of the variables, so no way to build the model

Outcomes

Figure out if any city stands out from the prediction model and know why.

Find out the uniformity that makes places where LGBT lives are good.
